Computer Vision Output Set with Annotations

Synthetic examples for output type, review status, and routing analysis

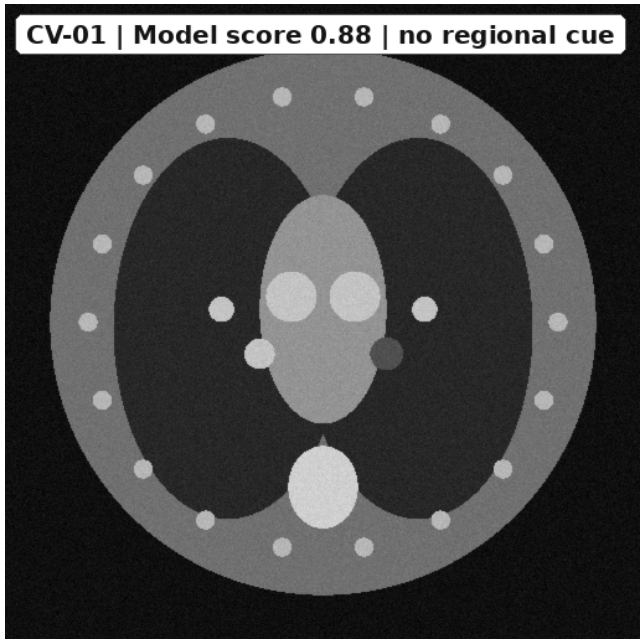

Synthetic training material—not clinical guidance. No live Microsoft Foundry access is required.

Available Workflow Destinations

Destination	Scenario Response Expectation	Important Constraint
Priority radiologist review	<= 30 minutes	Radiologist reviews original study; AI output does not establish diagnosis
Standard radiologist review	<= 4 hours	Routine clinical queue
Technical quality review	<= 60 minutes	Used for image-quality/context problems; returns to radiologist workflow after review

There is no autonomous clearance path. For each case, determine (1) whether the model output is image-level or regional, (2) whether the supplied evidence supports no discrepancy, a suspected artifact-related misread, or an indeterminate review status, and (3) the appropriate routing destination. The resource intentionally does not provide those three answers.

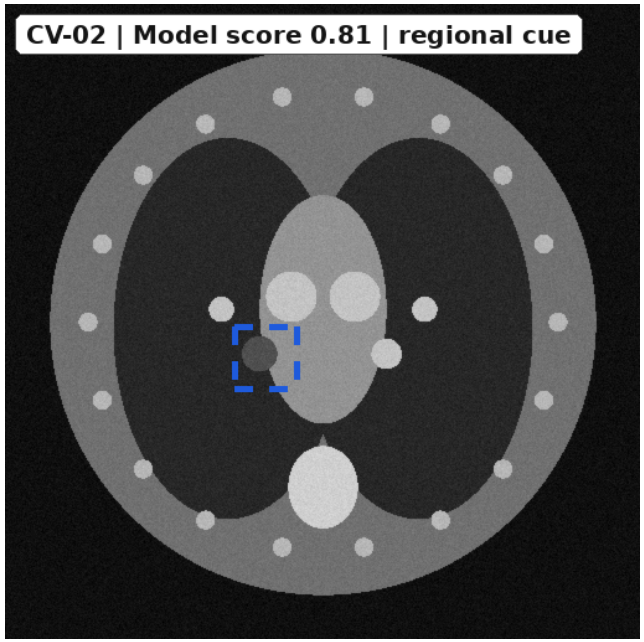

CV-01

Model score: 0.88
Model presentation: Image-level score only
Reference adjudication: Critical
Acquisition-quality note: Adequate
Regional cue drawn?: No
Evidence citation: CV-01

Learner task: determine output type, review status, and routing action using only the evidence above and the Scenario Guide.

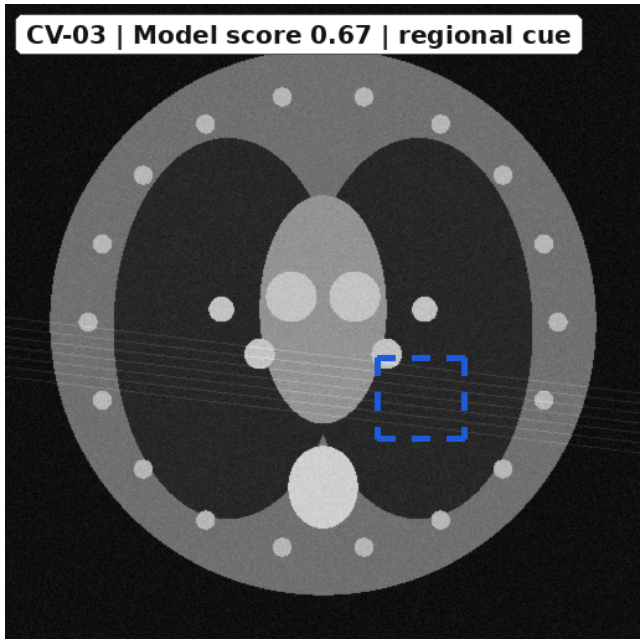

CV-02

Model score: 0.81
Model presentation: Regional cue
Reference adjudication: Critical
Acquisition-quality note: Adequate
Regional cue drawn?: Yes
Evidence citation: CV-02

Learner task: determine output type, review status, and routing action using only the evidence above and the Scenario Guide.

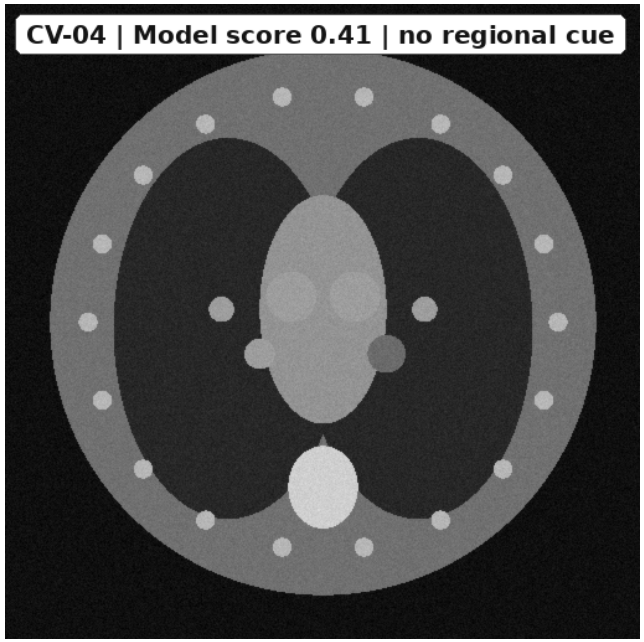

CV-03

Model score: 0.67
Model presentation: Regional cue
Reference adjudication: Non-critical
Acquisition-quality note: Motion artifact
Regional cue drawn?: Yes
Evidence citation: CV-03

Learner task: determine output type, review status, and routing action using only the evidence above and the Scenario Guide.

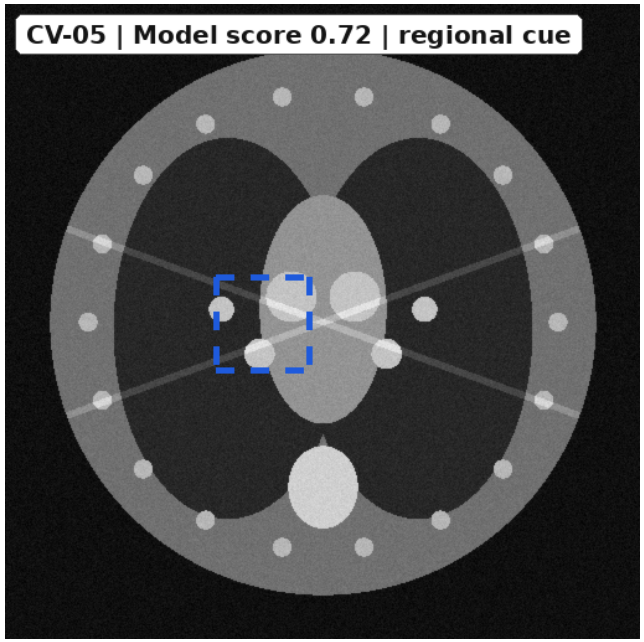

CV-04

Model score: 0.41
Model presentation: Image-level score only
Reference adjudication: Critical
Acquisition-quality note: Borderline/low contrast
Regional cue drawn?: No
Evidence citation: CV-04

Learner task: determine output type, review status, and routing action using only the evidence above and the Scenario Guide.

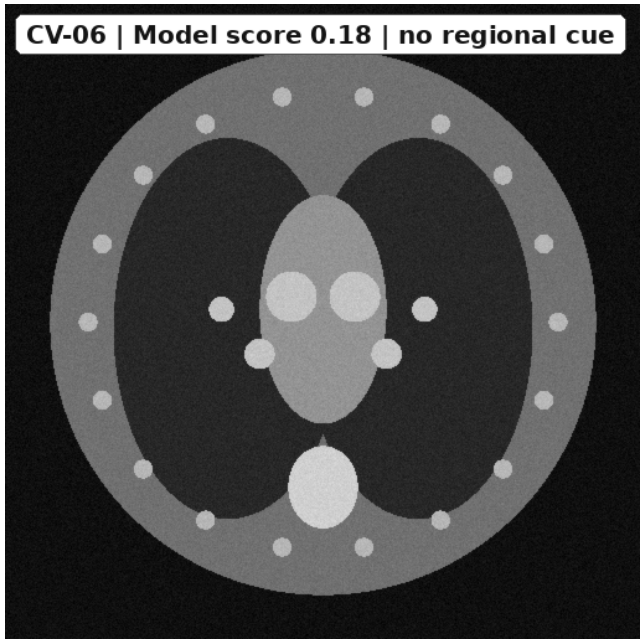

CV-05

Model score: 0.72
Model presentation: Regional cue
Reference adjudication: Indeterminate reference review
Acquisition-quality note: Severe streak artifact
Regional cue drawn?: Yes
Evidence citation: CV-05

Learner task: determine output type, review status, and routing action using only the evidence above and the Scenario Guide.

CV-06

Model score: 0.18
Model presentation: Image-level score only
Reference adjudication: Non-critical
Acquisition-quality note: Adequate
Regional cue drawn?: No
Evidence citation: CV-06

Learner task: determine output type, review status, and routing action using only the evidence above and the Scenario Guide.
